Points of Interest

View #1: South Kettle Crest Trail

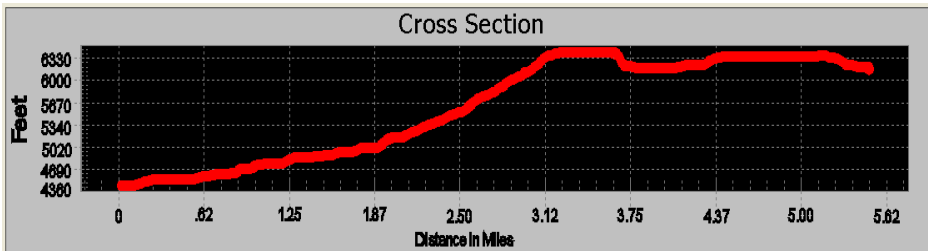

View #2: White Mt Fire

History:

The top of Edds Mt is a nunatak, an area of rock exposed above the glacier of the ice age. It is sedimentary rock lifted up by the igneous granite around it. A mile west of the junction of Forest Roads #330 and is the Iron Mt mining district in older meta-sedimentary rock. The origin of the name "Edds" is not documented but may be an early settler.

Cautions:

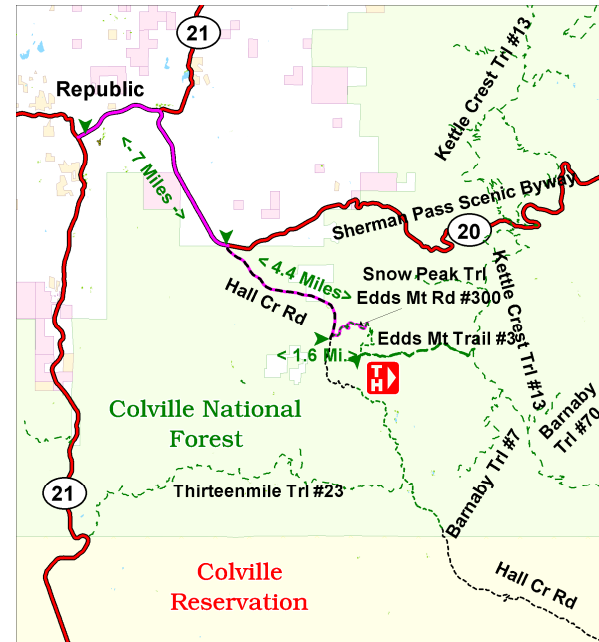

Treat surface water before drinking. Prepare for all weather. Watch out for large animals. No facilities and limited parking.

Edds Mt Trail # 3

Characteristics	
Elevation at Trailhead	4360 ft
Highest Point	6320 ft
Elevation Change	1960 ft
Length	5.6 Miles
Difficulty	More to Most Difficult
Season	Spring, Summer, Fall

Description: The first part of the trail is an old forest road. The middle 2 miles are steep and rocky. Large slab rocks make it difficult for horses. Keep a lookout for rock cairns that mark the trail in this section. Most water is well below the trail but a stream crosses The Kettle Crest Trail #13 just south of the junction with Edds Mt Trail #3. This is a wild and seldom used portion of the trail system providing views, wildlife and wildflowers for the avid hiker.
